

AWS Test Evaluation (Out of 15)

1. Create an EC2 instance

Candidate Answer: Name → AMI Linux → Key Pair → Security Group → Launch Instance

Correct Answer: Create EC2 → Select AMI → Instance type → Key pair → Security group → Launch

Result: Correct

2. Stop and start an EC2 instance

Candidate Answer: Instance state → Start / Stop

Correct Answer: EC2 → Instance state → Start / Stop

Result: Correct

3. Upload a file to S3 using AWS CLI

Candidate Answer: `aws s3 upload bucket-name test.txt`

Correct Answer: `aws s3 cp test.txt s3://bucket-name/`

Result: Incorrect

4. Make an S3 bucket public

Candidate Answer: `aws s3 bucket-policy`

Correct Answer: Disable block public access + add bucket policy

Result: Incorrect

5. Create a VPC

Candidate Answer: Create VPC → Subnet → Route table → Associate with public subnet

Correct Answer: Create VPC → Subnet → Internet Gateway → Route table → Associate

Result: Correct

6. Launch an RDS instance

Candidate Answer: Instance name → AMI Windows → Key pair → Security Group → Launch

Correct Answer: RDS → Create database → Engine → Instance class → Storage → Credentials

Result: Incorrect

7. Create an IAM user

Candidate Answer: `aws iam user Sheetal`

Correct Answer: `aws iam create-user --user-name Sheetal`

Result: Incorrect

8. Create an IAM role for EC2

Candidate Answer: `aws iam role role-name`

Correct Answer: Create role → Trusted entity EC2 → Attach policy

Result: Incorrect

9. Open port 80 in EC2 security group

Candidate Answer: Security group → Edit inbound → HTTP → TCP → 80 → 0.0.0.0/0

Correct Answer: Same steps

Result: Correct

10. Trigger Lambda with S3 bucket

Candidate Answer: NA

Correct Answer: Configure S3 event notification → Trigger Lambda

Result: Incorrect

11. Enable Auto Scaling for EC2

Candidate Answer: Launch Template → ASG → Scaling Policy → CloudWatch Alarm → Load Balancer

Correct Answer: Launch Template → Auto Scaling Group → Scaling policy

Result: Correct

12. Send a message to SNS using CLI

Candidate Answer: NA

Correct Answer: `aws sns publish --topic-arn ARN --message "msg"`

Result: Incorrect

13. Deploy static website on S3

Candidate Answer: Create bucket → Upload file → Bucket policy → Uncheck block public access

Correct Answer: Enable static website hosting + bucket policy

Result: Correct

14. Create a Route 53 hosted zone

Candidate Answer: NA

Correct Answer: Route 53 → Create hosted zone → Domain name

Result: Incorrect

15. Enable CloudTrail logging

Candidate Answer: NA

Correct Answer: CloudTrail → Create trail → Enable logging

Result: Incorrect

Final Score: 6 / 15
